

## Full Text Search

The Full Text Search functionality provides the possibility to directly search in a large number of titles both publicly available and texts licenced by publishers that are not publicly searchable elsewhere. As a special feature besides a usual full text search you are provided with the possibility to search for synonyms of topical subject headings and translations in various languages. If you select “Fulltext + Synonyms” searches comprise synonyms in the language selected in your VuFind interface. If you select “Fulltext + Multilanugage Synonyms” additionally synonyms and their translations in all supported languages are searched. The selection can be made by chosing in the menu to the right of the search box.

Beside the title search, selecting the “Search Full Text” tab allows you to filter by text type and provides you with a comprehensive set of matches.
